PROJECTS

Virtual Painter

- Developed a Virtual Painter tool by which one can try different color combinations on their own room photo.
- Tool created on MERN stack along with jQuery.
- Currently using Machine Learning and I am upgrading this tool which will make this tool the first tool with its functionalities in the market.

Gantt-Chart Editor

- It is an MVC project for scheduling the tasks and projects using GanttChart, which contains many advanced features.

Website for E-learning platform

- Developed a website for an educational institute named Ceedmy Institute in MERN stack.

Smart Bench (College IoT project)

- Installed features like facial attendance and send mails of attendance, exam monitoring and sleep detection features on a student bench.

Target distance measurement

- Measuring distance of target through ultrasonic sensor

Temperature and humidity measurement

- DHT11 is a Humidity and Temperature measurement sensor through which we made a Temperature and humidity measurement project

Ni-Rog Clinic and Employee Management System

- Developed to learn MVC.

Rooming

- Developed a website through which students can find roommates and also employees can find flatmates of their choice.
- Technologies used: MERN stack

RentalHub

- Designed the front-end part of RentalHub website which lets users rent different types of cars.
- Technologies used: ReactJS

Public Chatting App

- Build this app to learn T3 Stack.
- In this app people can talk in an open discussion and one can see a particular user's previous messages.
